Can you recommend six warm and six cool colors to start working with Water Soluble Oil Colors?

Oil Colors (DISCONTINUED) · https://danielsmith.com/nl/docs/can-you-recommend-six-warm-and-six-cool-colors-to-start-working-with-water-soluble-oil-colors/

When considering a color as either warm or cold, you need a point of reference. For example, with these three yellows – Hansa Yellow Light, Hansa Yellow Medium, and Hansa Yellow Deep:

- Hansa Yellow Light is greener than the other two, so it’s considered cool.
- Hansa Yellow Deep is redder than the other two, so it’s considered warm.
- Hansa Yellow Medium is cooler than Hansa Yellow Deep, but warmer than Hansa Yellow Light.

Cool Primaries:

1. Hansa Yellow Light
2. Lemon Yellow
3. Quinacridone Rose
4. Permanent Alizarin Crimson
5. Phthalo Blue (Green Shade)
6. Cerulean Blue, Chromium

Warm Primaries:

1. Hansa Yellow Medium
2. Cadmium Yellow Medium Hue
3. Quinacridone Coral
4. Quinacridone Red
5. Phthalo Blue (Red Shade)
6. French Ultramarine
